Explanation for Medical First-aid Stations Setting Suggestions

1. The health-related risks and influencing factors of large scale events

It is generally estimated that 0.3-4.0 out of 1 million people encounter sudden death, and the incidence rate will be higher if there are more vigorous activities. There will be one sudden death in 50,000 to 100,000 marathon runners. Therefore, it is necessary and important to prepare emergency medical treatment during the event. According to domestic and foreign statistics, fainting is a common condition at concerts. In hot weather, dehydration, heat exhaustion, and heat stroke must be paid attention to. If the venue is on hills and stairs, sprains and fractures must be paid attention to. Environmental factors including temperature, humidity, and altitude will affect the number of patients. High temperature, high humidity, and high altitude will lead to a higher medical utilization rate. The organizers of large-scale outdoor activities in summer should pay attention to hydration supplement and provide sufficient water to reduce the occurrence of heat exhaustion and heat stroke. Furthermore, the event organizer should publicize in advance and restrict the participation of those who are unwell to avoid accidents and injuries.

2. First-aid station location

- (1)The organizer should head over to the event location for location scouting along with the Division of Health Service and confirm the location of the first-aid station and ambulance. The set up location should be where most people can arrive within 3-5 minutes, and organize smooth passage of entrance and exit for better facilitation of medical rescue.
- (2)The medical first-aid station must be set up at a safe place and make sure the passage is smooth. Avoid crowded space or area next to the stage to prevent disasters such as the collapse of stages or structures.
- (3)Mark the location of the first-aid station clearly in advance on the floor plan, poster or manual. It can be displayed in bilingual and with the sign of the cross so that participants can easily recognize it.
- (4)All staff members should know the location of the first-aid station and its contact information to facilitate smooth operation of rescue.

3. The equipment of the medical first-aid station prepared by organizer

- (1)Prepare tables, chairs, and canopies by the needs of events, such as 1 table and 4 back chairs. For outdoor activities, please set up a shed that can shelter from wind and rain, and provide a cooling site for patients to rest. Please ensure that the lighting equipment is well lit for nighttime activities.
- (2)If the medical support includes an ambulance, the organizer should reserve parking space beforehand.
- (3)During the event, please provide drinking water, meals during mealtimes, and parking tickets for entering and leaving the campus for the medical support staff.

4. Medical first-aid stations supporting price list

- (1)The minimum medical support member should be 2 for each event, and the minimum hiring time is 4 hours. Any period of hiring time less than 4 hours shall be calculated as 4 hours.
- (2)Ambulance Team (including 1 EMT member, 1 nurse, and an AED): NT\$1,400/hour
- (3)Doctor: NT\$1,500/hour
- (4)Nurse: NT\$600/hour
- (5)If the applicant does not apply for an ambulance team for the section, and only applies for a doctor or nurse, the applicant must pay a NT\$500 traffic expense addition to the medical support service fee.
- (6)Please check with the cooperative company for demands not mentioned above.

Note

1. For staff members other than the medical personnel, in addition to knowing the location and contact number of the first-aid station, it is recommended that they also receive basic first-aid training. As the first responders to the scene are mainly safety or event staff members, the quicker medical support is provided, the faster the injured can receive care, enhancing the whole emergency system. Please note that if you are worried about cervical spine injury, do not move the injured person, and make sure the surrounding environment of the injured is safe.
2. When a large number of injured patients (more than 15 people) are expected to occur at the event site, the organizer should immediately notify 119 to inform the number of casualties and location of the incident, and start emergency medical service according to relative regulations and operating procedures for mass casualty medical support service.
3. If you have any questions regarding the first-aid station setting, please contact the Division of Health Service (phone: 03-5731054)
